

TAMPON BASKI İÇİN TAMPON KATALOĞU

Baskı tamponları, 2 FARKLI SERTLİK GURUBUNDA üretilmektedir.

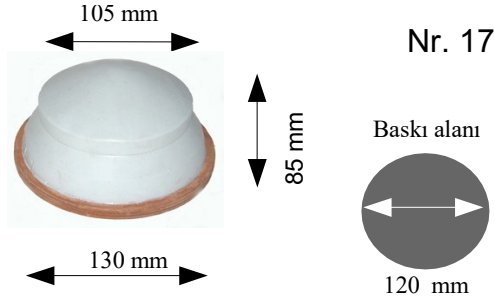

Tampon Rengi		Sertliği
	Açık Mavi	Orta sert (5-6 Shore A)
	Gül Kuruşu	Sert (9-10 Shore A)

- 1-Yeni alınan tampon, kullanılmadan evvel, bir defaya mahsus olmak üzere, **Serisan TS Tampon Sulandırıcı** ile (mevcut değilse selülozik tiner) silinmelidir. Daha sonraki kullanımlarda tamponlar, **Serisan IPA İzopropil alkol** ile silinir ve kapalı bir dolapta saklanır.
- 2- Tamponun baskı yapan yüzeyi, kuru elle veya kuru bez ile silinmez.
- 3- Taşımak için, polietilen poşetlere konulan silikonlar, en kısa zamanda poşetlerden çıkarılır ve tozsuz bir dolapta saklanır.
- 4- Sert tamponlarla daha iyi baskı yapılır. Ayrıca sert tamponların baskı ömrü daha uzundur. Ancak, basılan malzemenin uygun olmaması, şeklinin uygun olmaması, esnek olması durumunda, daha yumuşak bir tampon kullanılır.
- 5- Baskı sırasında ipliklenme olması halinde başlıca sebepleri:
 - a) Klişenin çok derin olması nedeniyle tamponun bol mürekkep alması. Klişe derinliği kontrol edilmeli ve fazla derin (25 mikrondan fazla) ise daha az derin klişe kullanılmalıdır.
 - b) Mürekkebin hızlı kuruması. Mürekkebe yeterli miktarda ve uygun geciktirici kullanılmamış olması durumunda gerçekleşebilir. Bu durumda Mürekkebe **Serisan TG Tampon Geciktirici** katarak ipliklenmenin azalıp azalmadığına bakınız.
 - c) Baskı yüzeyinde ve tamponda, statik elektrik oluşması. Statik elektriğin alınmasının en basit yolu, basılacak malzeme yüzeyini, anti statik bez ile silmek ve anti statik tampon kullanmaktır.
- 6- Sivri tamponların baskı sonucu, yassı tamponlardan daha iyidir. Baskı şeklinin, uygun olması halinde, sivri tampon kullanmak doğru olur. Ancak sivri tamponların, ilk temas notası olan tepesinde, yazı veya şekil gelmemelidir. Bu sebeple, sivri tamponlar, zemin baskılarına uygun değildir
Aynı problem, çatı şeklindeki tamponlar için de geçerlidir.
- 7- Tampon, basılacak şekli alacak kadar bastırılmalıdır. Daha fazla bastırmak, baskıyı bozabilir.
